

Call for Papers: JASIST Special Issue “Healthier Information Ecosystems” | Association for Information Science and Technology

By Author on SourceAssociation for Information Science and Technology

August 30, 2022

This special issue, “Healthier Information Ecosystems,” will focus on the interconnected nature of online pathologies, draw attention to the socio-technical aspects of information technology, and animate interdisciplinary approaches to addressing these problems. Similar to Buckminster Fuller’s mission of “World Game,” we want to aid in developing a wide variety of solutions (including but not limited to technical, political, social, and educational) to the wicked problems of our time to make “the world work for 100% of humanity, in the shortest period of time... without ecological offense or the disadvantage of anyone.”

We invite contributions that address the socio-cultural embeddedness of the problems plaguing information ecosystems and provide new ways of thinking about and strategies to achieve a healthier global information environment. We are actively seeking a broad approach to issues of healthier information ecosystems, including both theoretical and applied, qualitative and quantitative, as well as inside and outside the discipline of information science and technology. We are interested in transdisciplinary contributions that move beyond narrow, cross-sectional treatments of online phenomena to highlight the socio-technical dynamics of online spaces framed in cultural-historical contexts.
