

2023 Landscape Confronting Tech Power | AI Now Institute

By Amba Kak and Dr. Sarah Myers West

April 12, 2023

This report highlights a set of approaches that, in concert, will collectively enable us to confront tech power. Some of these are bold policy reforms that underscore the need for bright-line rules and structural curbs. Others identify popular policy responses that, because they fail to meaningfully address power discrepancies, should be abandoned. Several aren't in the traditional domain of policy at all, but acknowledge the importance of nonregulatory interventions such as collective action, worker organizing, and the role public policy can play in bolstering these efforts. We intend this report to provide strategic guidance to inform the work ahead of us, taking a bird's eye view of the many levers we can use to shape the future trajectory of AI - and the tech industry behind it - to ensure that it is the public, not industry, that this technology serves.
