

Building Confidence in COVID-19 Vaccines | CDC

By CDC

June 3, 2021

Many factors influence vaccine decision-making, including cultural, social, and political factors; individual and group factors; and vaccine-specific factors.

However, confidence in the vaccines,

the vaccinator, and the system all support the decision to get vaccinated.

Why is it important?

Most people in the United States are planning to get vaccinated against COVID-19, but some may want more information before seeking vaccination. They may want to know more about COVID-19 vaccines, including the process for developing and authorizing these vaccines and information about their safety and effectiveness.

People may also have previous experiences that affect their trust and confidence in the health system, which could affect their decision to get vaccinated.
