

# COVID-19 vaccine hesitancy in the US by county and ZIP code | Institute for Health Metrics and Evaluation

By Institute for Health Metrics and Evaluation

June 4, 2021

With our new visualization tool, IHME in partnership with COVID Collaborative shows vaccine hesitancy in the US by county and ZIP code, highlighting which areas could benefit most from increased vaccine acceptance. This tool is designed for local government and health officials to determine how they can best direct vaccination campaign efforts and will be updated with new data periodically. Follow the links below for more information about the vaccine hesitancy visualization tool.
