

Echo chambers, filter bubbles, and polarisation: a literature review | Reuters Institute for the Study of Journalism

By Dr. Amy Ross Arguedas, Dr. Craig T. Robertson, Dr. Richard Fletcher, Prof. Rasmus Kleis Nielsen

February 4, 2022

Terms like echo chambers, filter bubbles, and polarisation are widely used in public and political debate but not in ways that are always aligned with, or based on, scientific work. And even among academic researchers, there is not always a clear consensus on exact definitions of these concepts.

In this literature review we examine, specifically, social science work presenting evidence concerning the existence, causes, and effect of online echo chambers and consider what related research can tell us about scientific discussions online and how they might shape public understanding of science and the role of science in society.
