

Poor teens and tweens spend more time on screens than rich ones | Vox

By Rani Molla

October 29, 2019

Tweens and teens from families that make less than \$35,000 per year spent nearly two hours more with screen media each day than their peers with incomes over \$100,000, according to [new data from media nonprofit Common Sense](#).

Lower-income teens (13- to 18-year-olds) spent more than 8.5 hours each day on smartphones, tablets, video games, and other screen media, compared with six hours and 49 minutes for their high-income peers. Lower-income tweens (8- to 12-year-olds) used screen media for nearly six hours a day, compared with four hours for high-income tweens.
