

Reporter who wrote book on Saudi crown prince was allegedly targeted by hackers | The Guardian

By Stephanie Kirchgaessner

January 31, 2020

A [New York Times](#) reporter was allegedly targeted with spyware linked to Saudi Arabia in 2018, at a time when the kingdom was targeting several Saudi dissidents around the world.

A new [report by Citizen Lab](#) at the University of Toronto's Munk School found that Ben Hubbard, who has written a book about Mohammed bin Salman, the Saudi crown prince, was targeted by spyware known as "Pegasus", which is made by Israel's NSO Group.

The news, [which was also reported by Hubbard in the New York Times](#), represents the latest revelation about how Saudi Arabia has allegedly used spyware owned by NSO Group, among other technologies, to target dissidents and journalists.
