

The COVID-19 ‘infodemic’: what does the misinformation landscape look like and how can we respond? | Oxford Martin School

By Oxford Martin School

April 10, 2020

In mid-February, the [World Health Organization announced](#) that the new coronavirus pandemic was accompanied by an ‘infodemic’ of misinformation. Cristina Tardáguila, Associate Director of the [International Fact-checking Network](#) (IFCN), has [called](#) COVID-19 [‘the biggest challenge fact-checkers have ever faced.’](#)

In the face of this, research from [the Oxford Martin Programme on Misinformation, Science and Media](#) showed a significant and rapid response from independent fact-checkers. According to their sample, the number of English-language fact-checks rose more than 900% from January to March. They believe that the total volume has grown even faster.
