

Transatlantic Technology Policy Pipeline 2024 | German Marshall Fund of the United States

By Adrienne Goldstein and Brooke Tanner

January 18, 2024

2024 is a year of elections worldwide, including in the United States and European Union, and technology policy will play an important role. Election results could significantly shape policy on AI regulation, data privacy, and platform governance. Technology will also play a role in the electoral process, with AI-generated content and misinformation potentially influencing voter turnout.

In this post, GMF Digital revisits our 2023 tech policy predictions and looks ahead to transatlantic technology policy trends in the coming year.
