

US Wildfire Misinformation Mirrors What Happened in Australia | Gizmodo

By Ketan Joshi

September 14, 2020

Climate-intensified wildfires that changed the lived reality of a large majority of Australians in horrific and unforgettable ways triggered an unprecedented immune response to deny reality and a chance at serious climate change. American conservatives have been mostly silent on the wildfires so far, but the Australian experience suggests there's a risk of misinformation flaring up to downplay climate change's role in the carnage and shift blame elsewhere.
